
Are you the answer when patients ask **AI** for a dentist?

Your AI Referral Audit: how Dental Arts San Diego appears today
across ChatGPT, Gemini, Grok, Perplexity, and Claude —
measured with 108 real patient questions.

Prepared for

Dr. Alena Nawrocki, DDS · Dental Arts San Diego
707 Arnele Ave, El Cajon, California

August 2026

Michael Rivera · AvatarAgency.ai
310.980.9378 · michael@avataragency.ai

SECTION ONE

What we found

We asked all five major AI assistants **108 real patient questions** — the kind people actually type when looking for a dentist in El Cajon — and recorded every answer. Here is how often Dental Arts San Diego was recommended.

Share of discovery questions where your practice was named in the answer · 0% — 100%

THE SHORT VERSION

Across the questions patients actually ask, your practice is recommended roughly **one time in four**. You perform well on questions about **hours and emergencies** — facts that are published where machines can read them. You are close to invisible on questions about **languages, anxiety, family care, and most individual services** — all things you genuinely offer, but that appear nowhere a machine can find.

The three findings that matter most

1. What's working

You are the **#1 recommendation** for same-day emergency care and for evening appointments, and top-ranked for implants and All-on-4. Your Saturday hours win on nearly every platform. Your Google reputation — 4.6 stars across roughly 679 reviews — is a genuine asset.

2. What's costing you

Your team speaks **five languages**. Because that fact isn't published on your website or your Google listing, two of the four assistants recommend competitors who speak fewer — and one sent a Russian-speaking patient **30 miles away**.

3. What needs a decision

Your website currently displays a **4.9** Google rating while Google itself shows **4.6**, and the assistants are reaching past your strong Google profile to weaker listings on Yelp, Vitals, and WebMD. When an AI cross-checks and finds a mismatch, it hedges its recommendation instead of making one. This is fixable, and it is the highest-value reputation work available to you.

SECTION TWO

Why this matters now

For twenty years, being found meant ranking on Google. You could see the list, see who was above you, and work your way up. AI recommendations work differently.

When a patient asks an AI assistant "*who's the best dentist near El Cajon?*", they don't get ten links to compare. They get a short, confident answer naming two or three practices — and most people simply act on it. There is no visible ranking, no page two, and no way to tell you were left out.

The assistant builds that answer from what is publicly knowable about your practice: your Google Business Profile, your reviews, the directories you appear in, and your website. When those sources are thin, inconsistent, or written in a way machines can't interpret, the assistant recommends someone else — and you never find out it happened.

45%

of consumers used AI tools to find a local business in the past year

64%

adoption among ages 30–44 — your implant, Invisalign and veneer patients

63%

of AI users trust AI recommendations for local businesses

88%

then verify that recommendation against your reviews and listings

Source: BrightLocal 2026 Local Consumer Review Survey

THE OPPORTUNITY

Very few dental practices have done anything about this yet. Nothing in this report is exotic or expensive — most of it is publishing facts you already know to be true, in places you already control. Right now that is a head start rather than catching up.

How we tested

We wrote 22 questions modelled on real patient searches — covering general searches ("best dentist near El Cajon"), practical needs (Saturday hours, emergencies, new patients), specific treatments (implants, All-on-4, Invisalign, veneers, root canals, wisdom teeth, periodontal surgery, sleep apnea), and personal circumstances (languages spoken, anxiety about dental visits).

We asked every question on **ChatGPT, Google Gemini, Grok, Perplexity, and Claude**, using the ordinary consumer versions of each — the same tools, and the same answers, a patient would encounter. For every answer we recorded whether your practice was named, which practices were recommended instead, and which sources the assistant drew from.

Full question-by-question results accompany this report as a separate worksheet, so the identical test can be repeated later and compared side by side.

SECTION THREE

Where you are strong

Three kinds of questions produce a win for you on nearly every platform — and they have one thing in common.

Patient question	Result	What the AI said
Emergency dentist, same-day appointment	#1 answer	"Call Dental Arts San Diego first... it can often treat emergencies the same day."
Dentist with evening appointments	#1 answer	"The clearest match: it lists Tuesday hours until 7 PM."
Dentist open on Saturday	Named	Listed with correct Saturday hours, 8 AM–2 PM.
Dental implants / All-on-4	#1 answer	Recommended for full-arch and implant consultations.
Root canal treatment	Named	Recommended specifically for urgent access.

WHY THESE WIN

Every one of these is a **published, checkable fact**. Your hours are complete and accurate on your Google listing. Your emergency availability is stated plainly on your website. The machines can read them, so they repeat them with confidence. This is the entire mechanism of AI visibility, working in your favour — and it is proof the same approach will work everywhere else.

Your genuine assets

- **4.6 stars across roughly 679 Google reviews.** That is a substantial, hard-won reputation — larger than most competitors who currently outrank you.
- **Accurate, complete hours** including Tuesday evenings and Saturdays — and the assistants use them.
- **Your website welcomes AI systems.** Its technical settings permit every major AI crawler. Nothing is blocking you; there is simply not enough for them to read.
- **Specialist listings that outperform.** Your emergency and All-on-4 listings rank first in their categories — evidence that focused, well-described services win.
- **A 25-year history and strong credentials** (DDS, Fellow of the Academy of General Dentistry, Loma Linda, implant residency) — all stated on your site, and part of why assistants describe you accurately when asked directly.

SECTION FOUR

Where you are invisible

You were not named in any answer to the following questions — despite offering every one of these services.

Patient question	Who the AI recommended instead
Dentist who speaks Tagalog	Five other El Cajon practices that publish their languages
Dentist with multilingual staff	A practice advertising three languages
Best dentist for nervous patients	A practice that plainly states it offers sedation
Invisalign provider near El Cajon	Two orthodontic practices and a general office
Sleep apnea appliances	Two sleep clinics — you were mentioned nowhere
Periodontal surgery and bone grafting	Local periodontists and oral surgeons
Wisdom teeth removal	Oral surgery centres
Dentist accepting new patients	A practice advertising a \$39 new-patient offer
Family dentist recommendations	Three practices describing family and paediatric care
Implants, Invisalign and veneers in one place	Practices that list all three together on one page

There is a single cause behind every row: **these facts are true about your practice, but they are not written down anywhere a machine can read them.** Your website has no page for Invisalign, sleep apnea, periodontal surgery, or wisdom teeth. Your languages appear on neither your website nor your Google listing. Your \$125 new-patient offer is on your site but not framed as one.

The clearest proof

One question, two outcomes

We asked all five assistants for a dentist in El Cajon who speaks Russian. The results are the most useful finding in this audit.

Assistant	Result	What happened
ChatGPT	You won	Recommended Dr. Nawrocki as the only answer — "my first call." It found your languages in the Delta Dental provider directory .
Grok	You won	Named you the #1 answer , drawing on your Healthgrades profile .
Perplexity	You lost	Guessed at a competitor because <i>"a review mentions an 'Olga'"</i> — then sent the patient 30 miles to Rancho Peñasquitos.
Claude	You won	Named you #1 — "the only El Cajon practice advertising Russian-speaking staff" — citing Yelp and a Russian-physicians directory.
Gemini	You lost	Recommended two other practices entirely.

WHAT THIS PROVES

Same practice. Same truth. Opposite outcomes — decided entirely by **whether the fact was written down somewhere the assistant happened to read**. Where your Russian capability is published in a directory, you win outright. Where the assistant reads your website and Google listing instead — where the languages appear nowhere — you lose to practices that speak fewer languages than you do.

The general question makes the point again: asked for a dentist with multilingual staff, one assistant answered *"El Cajon Dental Center is the clearest match: it explicitly says its staff speaks English, Spanish, and Arabic."* Three languages beat five, on the strength of a single published sentence.

SECTION FIVE

What patients hear about you

When we asked the assistants directly about your practice and about you personally, they answered — but with noticeable hesitation. This matters, because 88% of people verify an AI recommendation before booking.

"Its own site shows a 4.9 Google rating, while Yelp is notably more mixed at about 3.8 stars across roughly 249 reviews — so patient experiences are not uniformly excellent."

— Perplexity, asked whether Dental Arts San Diego is a good dentist

Two separate issues are compounding here, and both are fixable.

1. A rating mismatch the assistants can see

Your website currently displays a **4.9** Google rating. Google shows **4.6**. AI assistants cross-check claims like this as a matter of course, and a mismatch between what a business says about itself and what the platforms show reads as a trust signal — a negative one. Correcting the figure on your site removes the flag entirely.

2. The assistants are reading your weakest profiles

Your strongest asset is Google: 4.6 stars, roughly 679 reviews. But when asked about you, the assistants pulled from **Yelp (3.8), Vitals, WebMD and Healthgrades** — profiles with a fraction of the reviews, where one older billing complaint carries disproportionate weight. One assistant summarised your reviews as mixed and specifically surfaced concerns about billing and treatment costs.

Google's Gemini compounds this: it ranks on **average rating only and never displays review count**. Against competitors sitting at 4.8 and 5.0 with far fewer reviews, your 679 reviews earn you nothing on that platform.

WHAT WE WOULD DO

Claim and complete your profiles on Healthgrades, Vitals and WebMD so the strong, current picture of your practice is what assistants find. Respond publicly and professionally to the older complaints — a measured reply is itself a trust signal machines register. Correct the rating claim on your website. Then route a share of new review requests to the platforms where you are thinnest, so no single weak profile can define you.

SECTION FIVE (CONTINUED)

Your four business listings

One thing we would like to discuss with you

We found **at least four separate business listings at 707 Arnele Ave** — Dental Arts San Diego, Emergency Dentist San Diego, All-on-4 Implant Clinic, and a listing under your own name — plus two further name variants on directory sites ("Alena Nawrocki DDS Inc" and one under a different corporate name entirely).

This is not simply a problem. The specialist listings are winning: your emergency listing is the #1 answer for emergency queries, and your All-on-4 listing is #1 for full-arch implants. That strategy is working. The difficulty is that your main practice listing inherits none of that success, the listings compete with one another on general searches, and the assistants are visibly unsure whether they describe one business or several — one printed your name as *"All-on-4 Implant Clinic / Dental Arts San Diego."* And one assistant went further: Claude described the All-on-4 listing as *"a marketing front for Dental Arts San Diego"* claiming *"more specialization than the review record supports"* — evidence that unlinked satellite listings are starting to read as a red flag rather than an asset.

Before recommending any change, we would like to understand who set these up and why. The likely fix keeps every listing and formally links them to one another as a single practice — gaining the specialist wins without splitting your identity.

SECTION SIX

Your website, read by a machine

A patient reads your website for reassurance. An AI reads it for facts it can quote. Here is what it currently finds.

What we checked	Status	What it means
AI crawler permissions	Good	Every major AI system is allowed to read your site. Nothing is blocked.
Home & contact pages	Good	Real factual sentences, complete address and hours — this is why your hours win.
Frequently asked questions	Missing	No FAQ content anywhere. One page contains an empty FAQ box displaying "No items found."
Service pages	Gaps	No page for Invisalign, sleep apnea, periodontal surgery or wisdom teeth. Your All-on-4 page is broken but still listed on Google.
Languages spoken	Absent	Not stated anywhere on the site.
Service page writing	Weak	Written as promotion rather than fact. One page promises patients will "walk out looking like Julia Roberts or Tom Cruz" — a claim assistants treat as marketing, not information, on a medical topic.
Machine-readable business labelling	Needs work	The behind-the-scenes labelling that tells machines your business type, hours and services appears to be missing or incomplete.
Site map	Broken	The index that tells search systems which pages exist is unreadable, and several outdated versions of pages are still indexed.
AI summary file	Missing	A new type of file that hands AI systems a clean summary of your practice. Most competitors don't have one either — an easy advantage.

IN PLAIN TERMS

Your website is a good brochure for humans and a thin document for machines. The fix is not a redesign — it is adding plainly-written facts, questions and answers, and a few invisible technical labels to what you already have.

SECTION SEVEN

What we would fix

Every gap in this report has a specific, known fix. Here is the complete list — in the priority order we would execute it.

Quick wins — days

1. **Publish your five languages** everywhere machines read.
2. **Correct the rating figure** displayed on your website.
3. **Fix the incorrect phone number** on two medical directories.
4. **Resolve the empty FAQ section** on your cosmetic page.
5. **Publish the new AI-summary file** most competitors don't have.

Core work — weeks

6. **Create pages for your five invisible services.**
7. **Add a comfort & anxiety page.**
8. **Publish your new-patient and family-care offers.**
9. **Install machine-readable labelling** across the site.
10. **Formally connect your four listings** as one practice.
11. **Repair the site map and rewrite service copy.**

Ongoing

12. **Rebalance your review profiles** so no thin listing defines you.

WHY THE HOW-TO ISN'T IN THIS REPORT

Each fix has implementation details that matter — where the languages go, what the labelling says, how the listings link without losing their #1 rankings. That execution, done for you, is the full program below.

SECTION EIGHT

Your next step

The full AI Referral Optimization program takes everything in this report and fixes it — done for you, explained to you, and proven with a re-test.

What the full program includes

- **All twelve fixes, executed for you** — listings, content, technical labelling, and the identity work across your four Google listings.
- **A private walkthrough session** — your results and your plan, in plain English, plus practical coaching on how AI is changing local marketing (your consulting hour folds into this).
- **The measured re-test** — on **November 10, 2026** we re-run these identical 110 questions on the same five platforms and deliver the before-and-after, side by side.

YOUR PRICING

The AI Referral Optimization program is **\$2,400**. As an existing production client, your rate is **\$950 — a \$1,450 courtesy** — and your already-purchased consulting session is folded into the walkthrough at no charge. This rate is reserved for you as part of your current engagement.

An honest note on what can and cannot be promised

No one can guarantee a particular AI answer — the platforms don't publish their reasoning and they change frequently. What we guarantee is the work: every trust signal these systems are known to check will be complete, consistent, and machine-readable — and you will have a measured before-and-after so you can judge the result yourself.

Ready when you are: reply to this email or call, and the quick wins begin this week.

Michael Rivera · Founder, AvatarAgency.ai · 310.980.9378 · michael@avataragency.ai

Methodology: 108 of 110 planned queries completed (two await a platform daily-limit reset). All queries were run on the standard consumer versions of each assistant in August 2026. The re-test uses the identical question set. Review counts and ratings are as displayed by the platforms at the time of testing.
